

Ideon: Powering the Digital Transformation for Carriers

Ideon builds and maintains the “pipes” that help medical and ancillary carriers connect with third-party platforms and software, where today’s benefits are quoted, enrolled, and administered.

Expand your ecosystem with minimal IT investment

With Ideon, you'll drive business through digital channels, grow your reach, and easily adapt to new opportunities – without the cost or burden of direct integrations to downstream partners. We deliver the speed, quality, reliability, security and efficiency necessary to ensure accurate quoting, smarter decision-support tools, and next-level enrollment experiences for consumers everywhere.

Digital Solutions for the 21st Century Carrier

Quoting

When carriers partner with Ideon, they open the door to a network of quoting platforms and unlock unlimited growth opportunities.

Expand Your Digital Reach in a Single Move

Through a single integration, grow your distribution and enable medical and ancillary quoting experiences across group, individual-under-65, and senior markets.

Ensure Accurate Quoting

The accuracy of your rates is ensured by using our Carrier Verification Tooling, giving you peace of mind that your plans are quoted accurately across platforms.

Reporting

Ideon provides weekly activity reports providing insights into who is quoting your products to whom and where.

Security

Ideon conforms to the highest levels of data integrity, operational transparency, and information confidentiality.

Enrollment and Member Management

Ideon provides carriers a single point of connection to benefits platforms, resulting in flexible, secure, and accurate enrollment processing—with little IT investment.

Platform connectivity, simplified

Ideon delivers enrollment data from an expansive network of benefits administration platforms — in each carrier's preferred format(s) (API, EDI, flat file, LDEX, etc.).

Faster, easier and accurate group setup

Cut group setup timelines down to days, not months, and lighten your team's operational burden. Once connected, we support ongoing maintenance for multiple platform integrations so you don't have to (no need for carriers to increase resources).

Efficient discrepancy resolution

Through our unique auto-reconciliation process and upfront validation, we proactively identify enrollment discrepancies to ensure that all member data is in sync between carriers and benefit platforms. By identifying data issues for resolution before they are sent to the carrier, our process helps minimize the downstream operational issues that cause member care access or coverage delays.

Data Validation/Aggregation

Let's Talk

Leverage Ideon's APIs and expertise to enhance your end-to-end digital solutions and create powerful user experiences for your members.
